

Prime Antenna Location

The IDS Center is the tallest building in downtown Minneapolis. Broadcast Services, Inc. worked closely with an architectural firm and developers to add two 110-foot broadcast poles after the building's completion. The site accommodates a variety of two-way, microwave, television and FM broadcast communications equipment. Common areas for telecommunications systems have been allocated on 51A and 51B. Standby electrical power facilities for transmitter plants can be appropriately located within the building.

At Broadcast Services, we pride ourselves on maintaining clean, interference-free sites. Our competitive rates can save you money. Contact Carrie Walker or Douglas Weaver for details.
